

MIRKA Galaxy

Self-sharpening grain technology

Mirka Galaxy is a new kind of high technology, self sharpening abrasive that is out of this world.

Galaxy gives you the opportunity to refine your craft, making your processes less time consuming, saving you both time and money.

What makes Galaxy different from the rest? Galaxy's astonishing features make it a no brainer to try for yourself.

- ✓ Long life
- ✓ Fast cutting
- ✓ Dust repellent
- ✓ Clogging resistant
- ✓ Multi purpose
- ✓ New Multifit technology
- ✓ High grit range
- ✓ Excellent edge wear resistance

Self-sharpening
Grain Technology

Galaxy's Multifit™ allows the abrasive to be placed on any machine without the need to align it, thanks to the optimised hole placement. With superb edge wear resistance, the universal Multifit hole configuration enables long life and optimal dust extraction.

The ceramic grains of Galaxy are engineered to stay sharp, as new abrasive edges are formed as they break down during the sanding process, enabling Galaxy to continue cutting. The ceramic grains retain sharpness, giving Galaxy a long life and a fast cut.
